| ; | | |
| • | 1. ODAMA/MMEDP has reviewed your letter of 6 Oct 1971. We have determined that to exchange the existing 20 foot power cord and | |
| | reel assembly for 20 feet of heavier duty wire, to be hung on the side of the elevating stand, is not acceptable. The specification | |
| | states that a retractable, lockable power cord be supplied and it is our desire that this be done. | · · · |
| ; | 2. We believe that a larger, more powerful reel assembly, which | 10 |
| | will handle the heavier wire, is required. It is not the intent of the specification to allow the full length of the power cord | |
| | | |
| | to be extended in order to facilitate cooling of the wire. It | |
| | is intended that the user have the capability to retrieve as much | |
| | is intended that the user have the capability to retrieve as much cord as required to reach the power supply with the balance neatly | 1 |
| | is intended that the user have the capability to retrieve as much cord as required to reach the power supply with the balance neatly contained on the reel assembly. | |
| | is intended that the user have the capability to retrieve as much cord as required to reach the power supply with the balance neatly contained on the real assembly. 3. The 16 gauge HPN heater-cord originally supplied is just too | |
| | is intended that the user have the capability to retrieve as much cord as required to reach the power supply with the balance neatly contained on the reel assembly. 3. The 16 gauge HPN heater-cord originally supplied is just too light to handle the power requirements of the 1540. A larger wire, | |
| | is intended that the user have the capability to retrieve as much cord as required to reach the power supply with the balance neatly contained on the reel assembly. 3. The 16 gauge HFN heater-cord originally supplied is just too light to handle the power requirements of the 1540. A larger wire, and if necessary reel assembly/canister, is definitely required. | |
